

AIM

The webinar focuses to ensure that the patient safety is institutionalized as a fundamental principle of the health care delivery system in improving health outcomes.

OBJECTIVES

1. To understand essential components of patient safety in hospital.
2. To recognize the various types of errors in hospital.
3. To provide clear priorities and strategies for improving patient safety.

Introduction

Patient safety is one of the key components of health services. Patient safety related errors includes medication errors, hospital infections, patient falls and bedsores. Effective patient safety is related to lowering the rate of patient's complications and fewer adverse events. Patient safety is a culture whereby nurses are aware of errors and are encouraged to discuss them. This, in turn, improves their ability to learn from past mistakes and take corrective measures.

PROGRAMME SCHEDULE

Moderators: Ms. Zayeda Khan
Ms. Arpita Khandekar

Time	Session Title	Resource persons
